# R Programming For Natural Resource Professionals

Lab 1: Introduction to R markdown, basic math, objects

Jared Homola
TNR 163
jhomola@uwsp.edu

## "Special characters" in R

 Certain characters (letters, symbols, etc.) have specific meaning in R so they need to be treated different.

```
$ * + . ? [ ] ^ { } | ( ) \
```

- These require using an escape character "\"
- File paths are the most common issue
  - Windows file paths look like: G:\My Drive\. Won't work in R.
  - Need to use "G:\\My Drive\\" or "G:/My Drive/."

## Challenges of working in a computer lab

- Save your scripts to OneDrive
- We'll start working in "Projects" next week which will help
- Packages may need to be reinstalled (still figuring this one out for UWSP's computer labs)
  - This will need to happen on your personal/work computer
  - You're welcome to use your own computer in class rather than the lab's
  - Tools exist for package portability, but we likely won't cover them

## The "Library" code block

Specific to this course, but you might find helpful elsewhere.

```
18 * ```{r}
19 ### Set up you workspace with the necessary data and packages
20 list.of.packages <- c("remotes") ## Vector of required packages for the assignment
21 new.packages <- list.of.packages[!(list.of.packages %in% installed.packages()[, "Package"])] ## Check to see if these packages are installed
22 if(length(new.packages))
23 install.packages(new.packages) ## Install the packages that aren't installed</pre>
```

## R markdown

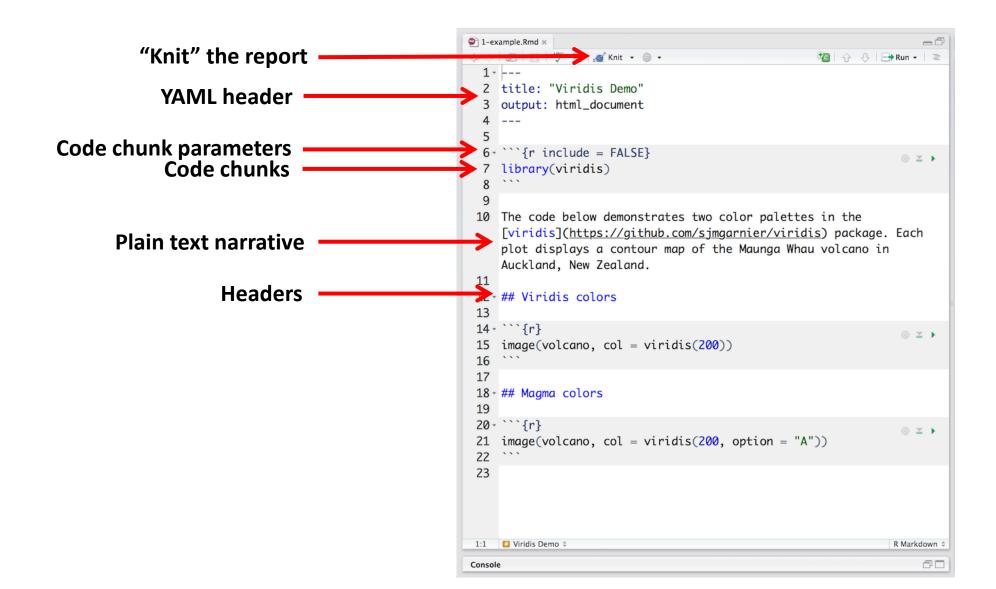

• Platform for generating reports with embedded code

### R markdown

#### Why use R markdown?

- Versatility: output as HTML, Word, PDF, and more
- Code and text side-by-side
- A lot of formatting can be automated
- Standardize reports and documents

YAML header

#### **YAML** Header

- "Yet another markup language"
- High level formatting such as font size, figure size, title, subtitles, etc.
- Specify outputs:

```
output: pdf_document
output: word_document
output: rtf_document
output: md_document
```

```

    title: "Viridis Demo"
    output: html_document
 6 · ```{r include = FALSE}
                                                                  ⊚ ≚ ▶
  7 library(viridis)
 10 The code below demonstrates two color palettes in the
     [viridis](https://github.com/sjmgarnier/viridis) package. Each
    plot displays a contour map of the Maunga Whau volcano in
    Auckland, New Zealand.
11
 12 - ## Viridis colors
 13
                                                                  ⊚ ≚ ▶
15 image(volcano, col = viridis(200))
 17
18 - ## Magma colors
 19
                                                                  21 image(volcano, col = viridis(200, option = "A"))
 23
1:1 | | Viridis Demo |
                                                                 R Markdown
Console
```

#### **Code chunk parameters**

OPTION	<b>DEFAULT</b>	EFFECTS						
echo	TRUE	display code in output document						
error	FALSE	TRUE (display error messages in doc) FALSE (stop render when error occurs)						
eval	TRUE	run code in chunk						
include	TRUE	include chunk in doc after running						
message	TRUE	display code messages in document						
warning	TRUE	display code warnings in document						
results	"markup"	"asis" (passthrough results) "hide" (don't display results) "hold" (put all results below all code)						
fig.align	"default"	"left", "right", or "center"						
fig.alt	NULL	alt text for a figure						
fig.cap	NULL	figure caption as a character string						
fig.path	"figure/"	prefix for generating figure file paths						
fig.width & fig.height	7	plot dimensions in inches						
out.width		rescales output width, e.g. "75%", "300px"						
collapse	FALSE	collapse all sources & output into a single block						
comment	"##"	prefix for each line of results						
child	NULL	files(s) to knit and then include						
purl	TRUE	include or exclude a code chunk when extracting source code with knitr::purl()						
See more options and defaults by running str(knitr::opts_chunk\$get())								

```
2 title: "Viridis Demo"
 3 output: html_document

### Homework reminders

Currently planning on some time in class on Wednesdays to work on homework assignments but that may change.

Use your resources (internet, colleagues, instructor, help files), but cite them.

- Either list who you worked with for specific questions or credit them in a comment near the top of the document.
- Do not turn in identical assignments.
- You won't necessarily receive all answers during instruction.
- Turn in via email (<a href="mailto:jhomola@uwsp.edu">jhomola@uwsp.edu</a>). Send both the .rmd and .html knitted version.

Strive for efficient coding. If a problem can be solved using substantially less code, you will not receive full credit.
